CLAIMS

What is claimed is:

1	A computer program embodied on a computer readable medium for
1.	
	developing component based software capable of linking information,
	comprising:
	a data component that stores, retrieves and manipulates data utilizing a
	plurality of functions; and
	a client component including:
	an adapter component that transmits and receives data to/from the
	data component,
	a business component that serves as a data cache and includes
	logic for manipulating the data, and
	a controller component adapted to handle events generated by a
	user utilizing the business component to cache data and the
	adapter component to ultimately persist data to a data repository,
	wherein the client component is adapted for providing information
	concerning an individual and an event, allowing a user to input
	information concerning involvement of the individual in the event
	allowing the user to link the individual to the event, and outputting linked
	information concerning the individual, the event, and the involvement of
	the individual in the event.
	1.

26

2. 1 The computer program as set forth in claim 1, wherein the client component is 2 further adapted for allowing the user to link the individual to a sub-component of the event. 3 3. The computer program as set forth in claim 1, wherein the information 1 concerning the individual is provided from a client database. 2 4. 1 The computer program as set forth in claim 1, wherein the information concerning the event is provided from a claim database. 2 5. The computer program as set forth in claim 1, wherein the event is insurance 1 2 related. The computer program as set forth in claim 1, wherein the client component is further adapted for providing the information concerning the involvement of 3 the individual in the event to another application. 7. The computer program as set forth in claim 6, wherein the application 1 provides a correspondence template, which includes the information 2 concerning the involvement of the individual in the event. 3 8. 1 A computer program embodied on a computer readable medium for 2 creating a component based architecture capable of linking information, comprising: 3 4 a user interface form code segment adapted for collecting data from a user 5 6 input; 7 8 a business object code segment adapted for caching data; 9 10 an adapter code segment adapted for transmitting data to a server; and 11 a controller component code segment adapted for handling events 12 13 generated by the user interacting with the user interface code segment, 14 providing validation within a logic unit of work, containing logic to

3

interact with the business component, creating one or more business 15 objects, interacting with the adapter component to add, retrieve, modify, 16 or delete business objects, and providing dirty flag processing to notify a 17 user of change processing; 18 19 20 wherein the computer program is adapted for providing information concerning an individual and an event, allowing a user to input 21 22 information concerning involvement of the individual in the event, 23 allowing the user to link the individual to the event, and outputting linked 24 information concerning the individual, the event, and the involvement of 25 the individual in the event. 9. The computer program as set forth in claim 8, wherein the computer program 1 2 is further adapted for allowing the user to link the individual to a sub-3 component of the event. 10. The computer program as set forth in claim 8, wherein the information 1 concerning the individual is provided from a client database. 2 11. The computer program as set forth in claim 8, wherein the information 1 concerning the event is provided from a claim database. 2 1 12. The computer program as set forth in claim 8, wherein the event is insurance related. 2 The computer program as set forth in claim 8, wherein the computer program is further adapted for providing the information concerning the involvement of the individual in the event to another application. 3 14. 1 The computer program as set forth in claim 13, wherein the application 2 provides a correspondence template, which includes the information

concerning the involvement of the individual in the event.

1

2

3

A computer program embodied on a computer readable medium for 1 15. 2 creating a component based architecture for allowing communication between a plurality of clients and a server in order to link information, 3 comprising: 4 5 6 one or more client components included with each client, each client component of each client adapted for communicating and manipulating 7 data with a first data type, wherein the client component is adapted for 8 9 providing information concerning an individual and an event, allowing a 10 user to input information concerning involvement of the individual in the 11 event, allowing the user to link the individual to the event, and outputting linked information concerning the individual, the event, and the 12 13 involvement of the individual in the event; 14 15 one or more server components adapted for communicating and manipulating data with a second data type; and 16 17 one or more adapter components included with each client for translating 18 19 data from the one or more client components to the second data type when 20 communicating data from the client to the server and further translating 21 data from the one or more server components to the first data type when 22 communicating data from the server to the client. 16. The computer program as set forth in claim 15, wherein the client component is further adapted for allowing the user to link the individual to a sub-

1 17. The computer program as set forth in claim 15, wherein the information concerning the individual is provided from a client database.

component of the event.

- 1 18. The computer program as set forth in claim 15, wherein the information concerning the event is provided from a claim database.
- 1 19. The computer program as set forth in claim 15, wherein the event is insurance related.
- The computer program as set forth in claim 15, wherein the client component is further adapted for providing the information concerning the involvement of the individual in the event to another application.
- The computer program as set forth in claim 20, wherein the application provides a correspondence template, which includes the information concerning the involvement of the individual in the event.
